

## Support Rings / Rough In Kits

**ER800**

Support ring for 8" speakers using torsion mount baffles. Used with ETBS T-bar supports. Provides a cost effective way to install torsion mount baffles when a back box is not required.

**EDR series rough in plates**

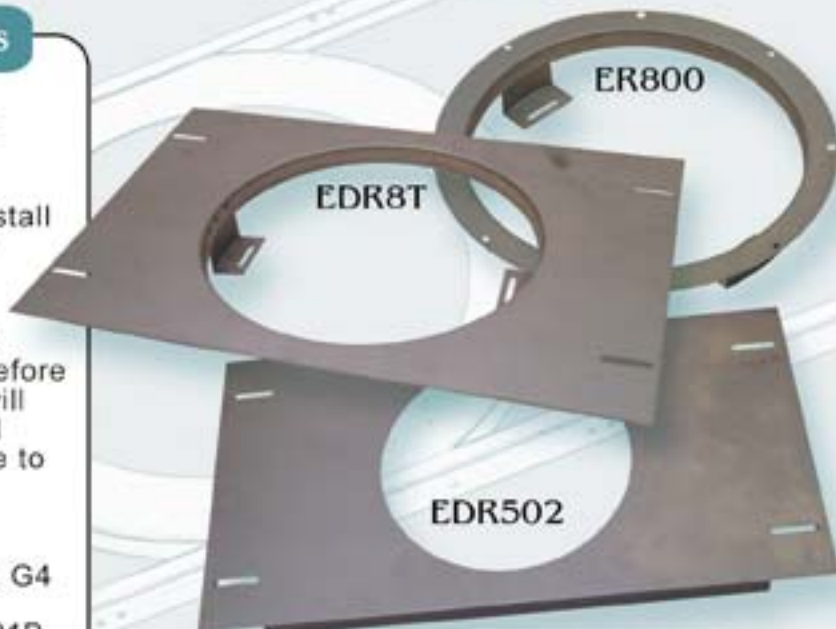

This series of pre-install plates are used when pre-wiring is planned before drywall is installed. These plates will span on 16" centers giving dry wall contractors a template, and a place to pre-wire to.

**EDRG6** for use with G6 speaker systems.

**EDR502** for use with EPCS502B & G4 speaker systems.

**EDR501** for use with EMT501 & 501B speaker systems.

**EDR8T** for use with EPCS800 series speaker systems.

## T-Bar Supports

**ETBS**

24" T-bar supports can be used on their own or with any standard back box to provide tile support for speaker baffles installed in drop ceiling tile.

**ETBST**

T-Bar support 24" length for use with torsion mount baffles when not using a back box.

## Tile Bridge

**ETBSU**

The universal tile support saves time and money when installing ceiling speakers that do not require a back box. It will work easily with any speaker baffle designed for an 8" speaker whether it is round, square, torsion or standard four hole mounting. This 24" tile support is easy to install.

**ETBST**

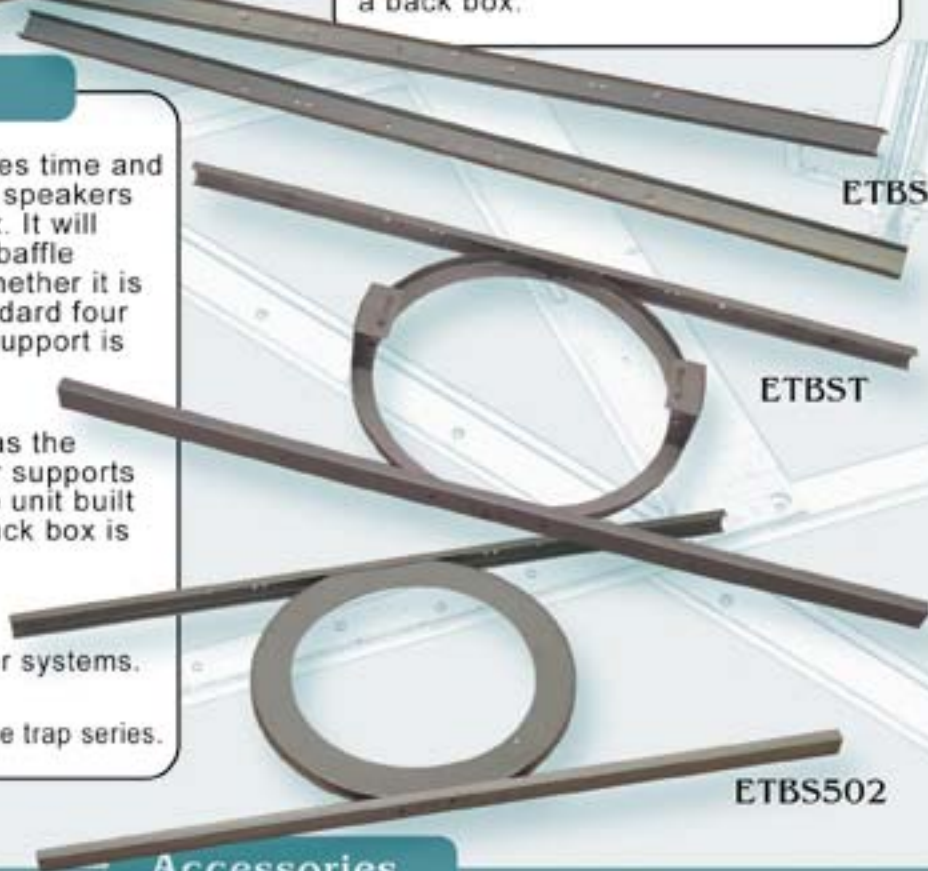

This tile support is the same as the ER800 however the ETBS bar supports are attached. It is a one piece unit built for a speedy install when a back box is not required.

**ETBS502**

24" one piece tile support for use with EPCS502B speaker systems.

**EMTBS501**

Same as above. Works with mouse trap series.
